

Don't criticize, learn to think critically.

What do you think can be improved in the school without you noticing it?

Have you ever wondered why it's sometimes difficult to learn? Who can support you?

Did you know what your problem solving skill is? And can that be developed?

Now you have the opportunity to experience this.

Your teachers attended a special training to help you grow until you enjoyed the summer holiday.

How does it work? Test yourself!

At the beginning of the school year 2019 we look at the problem-solving and critical thinking skills, and at the end of the year, how much it has changed during your studies. Don't be afraid, it's all anonymous and not a test. Our goal is to observe whether the methods we have collected are working.

Of course, you will get information on time and you can also ask your teachers.

Thanks for taking the challenge!
